WORKLOOM · Overview

Do the work. Get paid in USDG, or in stock tokens where eligible. Every job is funded before anyone sees it.

One line: Workloom is the work marketplace for everyday people. You'll find:

- quick phone tasks;
- freelance gigs with milestones;
- part-time contracts paid on a schedule;
- tasks that AI agents need humans for.

Every job is funded up front, and pay is credited the moment your work is approved. Each approved job adds to a work history you own. Pay is in USDG; in eligible countries (not the US, UK, Canada or Switzerland; issuer's terms), you can choose to take part of it in Robinhood Chain stock tokens.

Chain: Robinhood Chain (4663), USDG.

Token: $WLOOM (working ticker; $LOOM is taken), utility only.

Status: v1 spec, 2026-10-16. Name-check "Workloom" (domains, handles, app stores) and the ticker before brand lock.

---

1. The gap (recon, Oct 2026)

Finding (dated)	So what
"Agents hiring humans" went viral, then stalled. RentAHuman (launched Feb 1 2026): • ~600k sign-ups and ~11,300 open bounties; • only **~5,500 jobs completed**, with ~50 workers per bounty; • scam-like listings and payment errors fixed by hand; • no worker-safety policy discussed. (Built In, Mar 2026)	People want this work. **Trust, pay and safety are what's broken:** most listings never pay anyone
Freelance and gig platforms charge workers ~10–20% and hold payouts for days. Stripe's survey of 2,000+	Workers keep the full listed pay; clients pay

independent workers in 20 countries: fees, slow settlement and broken cross-border payouts are the top pains (Stripe, 2026)	the fee; pay is credited on approval
150,000+ agentic accounts on Robinhood since May 2026; a USDG x402 payment rail exists on Robinhood Chain (Yahoo Finance, Oct 1 2026; Priors)	AI agents can post and fund human tasks with no bank and no card
Recruiters can't trust what they see: applications are flooded with AI-generated material (Mar 2026 reporting)	A record of **approved, paid work** is a signal that's hard to fake cheaply

Category claim (narrowed; (U) until rechecked launch week): *"The first work marketplace on Robinhood Chain where every job is funded before it's listed and workers can choose stock-token pay."*

---

2. What's on Workloom

Work type	How it works
Quick tasks	1–3 minute tasks from your phone, no experience needed: • rate two AI answers; • try a sign-up flow and report what broke; • tag images; • check a translation in your language. Each shows its estimated hourly rate
Agent tasks	Batches from AI agents and their builders: Judge, Verify, Test and Label, with test questions and agreement checks. Agents post by API or MCP and fund in USDG
Gigs	Projects from people and businesses: design, writing, video editing, development, translation, online tutoring, research, virtual assistance. Split into milestones. **A gig is listed only once its first milestone is funded**, and every later milestone is funded before work on it starts
Contracts	Ongoing part-time work, paid in **Pay runs** (weekly or monthly). The current period is **reserved in full before it starts**, and pay can stream by the second
Local (later,	Checks in public commercial places only (is the shop open, shelf price, menu photo). Faces and plates are blurred. Never about a person, never on

strict)	private property

---

3. Built for everyday people

Part	What you get
60-second start	Face ID passkey, no seed phrase, no ID. Web app first; a Telegram mini app where Telegram's rules allow it (U). Your first quick task is ready before setup ends
Fair-pay floor	Every item shows its estimated hourly rate. Work below **$6/hour (estimated)** isn't listed, and the real rate is tracked as tasks are done
Skill ladder	Pass short tests to unlock better-paid work: Judge → Expert Judge (by subject), Tester → QA Lead, Translator by language. Gigs and contracts open up as your record grows
Pay that's yours fast	Credited on approval. Withdraw any time (gas covered up to 10 times a month) or get it in the next payout (≤ 6h). **No fees on your pay**
Choose how you're paid	USDG by default. In eligible countries, you can choose to take a share in stock tokens. **The default is 0%.** Tokens are listed neutrally (no suggested picks), and you see a risk screen before any split is set. If a swap can't run (market closed, price feed stale), that part arrives as USDG
Holdings view	Your stock-token balances at today's value next to what you were paid. No forecasts, no advice
Your pay handle	A short handle (`@maya.design`) using the chain's handle standard, so clients and agents pay you without copying addresses
Work history	Every approved task, milestone and Pay run adds an entry to your WorkerPass: work type, date, client rating, badges. **You choose what to share.** Viewers can check entries against the chain. See the privacy note in §8
Tips	Clients can add a tip on approved work, in USDG or an allow-listed stock token (capped at 100% of that item's pay; labelled as a stock token, not a share)
Launch	**Invite a friend:** both get $3 in USDG after the friend completes 10 approved

bonuses (USDG only)	tasks, with test-question accuracy above the bar, over at least 7 days. **First tasks:** +50% on your first 5 approved quick tasks. Both come from a fixed launch budget, are capped per WorkerPass and end when the budget is used
For clients	Post a gig in 2 minutes; invite workers by handle; see work histories; pay by milestone or Pay run; pay in USDG, or from Stock Tokens you hold (converted to USDG at funding)

---

4. How work gets paid

```
Quick / agent tasks:  funded batch → claim (time-boxed) → submit → automatic c
Gigs:                 milestone funded → worker accepts + starts → submit → re
Contracts:            next period reserved → work → Pay run (or stream) → cred
Disagreement:         reason required → reviewer assigned (drawn after a delay)
```

- **Silence counts as approval:** if the client or agent doesn't review in time, the work is credited automatically. Anyone can trigger this; Workloom isn't needed.
- **Workers never pay review fees.** The client funds a review reserve, which goes back to the client only if they win.
- **Clients can cancel only unstarted work.** Once a worker has started a milestone, the only way out is the deadline-plus-grace path, where a reviewer can split the pay for partial work.

---

5. Why it wins

1. **Every listing is real money,** funded before anyone sees it.
2. **Workers keep the full listed pay,** credited on approval, with a fair-pay floor and protections against unfair rejection.
3. **Many kinds of work in one app:** a few minutes on the bus, a freelance project or a steady contract.
4. **Agents and people both hire here,** with the same escrow and the same rules.
5. **Choice of pay:** USDG anywhere; stock tokens where eligible, as the worker's choice.

---

6. Fees

Line	Price
Agent and quick-task batches	**12%** on top, paid by the requester
Gigs	**8%** on top of each milestone, paid by the client
Pay runs	**1%** of each run, capped at $15
Worker fees	**None.** Swap costs on a stock-token share come out of that share (route cost only, no Workloom markup)
Tips	Tipper pays route cost; no Workloom fee
Reviews	From the client's review reserve; workers never pay
Launch bonuses	Fixed launch budget (proposed $20k), not from fees or anyone's pay

- **$WLOOM (utility only):** lower client fees (up to 3 points) and early access to new work types. It doesn't change stakes or anti-abuse rules, and it pays nothing out.
- **Split of fees:**
  - 80% to running the work (checks, reviewers, payout gas, support);
  - 10% treasury;
  - 5% for client-discount funding;
  - 5% burn.

---

7. Launch

One line: *"Do the work. Get paid the moment it's approved."*

Three sentences:

1. Workloom pays you for quick tasks, gigs and contracts, and every job is funded before you see it.
2. You keep the full listed pay, credited on approval.
3. Where eligible, you can choose to take part of it in stock tokens.

Demo clip: a worker rates 40 AI answers on the bus → credited $7.10 → takes a design gig → milestone 1 funded, delivered, approved → pay arrives, with 10% as a stock token by her own choice.

8. Kill criteria (set now; all cluster-filtered)

Day	Metric	If missed
14	≥ 5,000 WorkerPasses; ≥ 30% complete a paid task; ≥ 2,000 paid assignments; ≥ 25 paying requesters	Cause test; simplify onboarding; narrow to Judge + Verify
30	≥ $20k paid to workers; realised median hourly rate ≥ the floor	Keep only the 2 best task types
30 (gigs)	≥ 300 funded milestones; ≥ 150 workers paid for gigs	Narrow to the 3 best gig categories
60	≥ 40% of requesters post again; ≥ 40 teams on Pay runs	Keep Pay runs as a feature; focus on tasks + gigs
90	< $50k monthly paid to workers	**Wind-down:** new listings stop. Everything in progress finishes through its normal path. Unclaimed batches, unstarted milestones and unreserved team balances refund on-chain. Stakes return on schedule. The leftover bonus budget goes back to the treasury

Exit is never gated. Each of these works on-chain with Workloom offline:

- refunds of unclaimed or unstarted work;
- default approvals;
- Pay runs;
- withdrawals.

Stakes return 14 days after leaving. Any freeze is a single, time-limited one.

9. Honest limits

Workers and pay

- **Workers are independent and pseudonymous.** Workloom doesn't employ anyone, withhold tax or provide benefits. **Clients are responsible for how they classify the people they hire.** Taxes are the worker's responsibility.
- **Workers must be 18 or older** (self-declared; no ID checks).
- **Pay floors are estimates.** The realised rate is shown and tracked.
- **Sanctions screening:** payout addresses are screened against public sanctions lists. A flagged worker's not-yet-credited pay can be held for up to 30 days during an appeal; credited balances are never frozen. This is the one exception to "never gated".

Trust and reviews

- **Workloom runs the check attestors and chooses and pays the reviewers.** Reviewers are paid a flat fee whatever they decide. Two-of-three signing protects against one leaked server, not against Workloom. Reviews can be wrong.

Privacy

- **Payouts are public on-chain** (address and amount). Clients see pseudonymous IDs in the app.
- **Sharing your work history reveals your payout address**, and through it your public pay history. Use a fresh payout address per client if that matters to you.
- **Your work history proves approved, paid work, not independent quality checks.** It shows how many distinct clients stand behind your entries, and entries between linked accounts are marked.

Stock tokens

- **They're issuer products, not shares.** They carry no shareholder rights and their prices move.
- **Eligibility is self-declared plus front-end geo rules;** the contract can't verify it.
- **Whether the issuer's terms allow holding tokens bought through a DEX by wallets with no ID is (U).** If not, payouts stay USDG.
- **Workloom gives no investment advice.**

Platform

- **Telegram's mini-app rules for blockchain features may restrict a Robinhood Chain app (U).** The web app is the main path.

- **Some work isn't allowed:**
  - anything illegal;
  - tasks about, or locating, individuals;
  - impersonation;
  - CAPTCHA or verification bypass;
  - fake reviews or engagement;
  - graphic or sexual content;
  - credential handling;
  - collecting personal data;
  - pay-to-work;
  - moving off-platform;
  - installing apps, connecting wallets or entering payment details;
  - creating accounts on other services;
  - academic cheating;
  - regulated professional work without the worker's own licence.
- **Local tasks carry real-world risk.** They're limited to public commercial places, blurred, and always skippable.
- **USDG on Robinhood Chain.** Chain and issuer events are outside Workloom's control.

---

10. What not to say

- **Never:**
  - "own the stocks", "get paid in Nvidia" or any named-stock hook;
  - "free stocks";
  - "earn", "passive income", "get rich";
  - "salary", "employer", "payslip" (say "pay statement");
  - "employment";
  - "guaranteed work";
  - "rent a human", "AI boss";
  - "yield";
  - "investment advice";
  - "rewards" for ordinary pay;
  - "partner" for any chain, issuer or AI company.

- **Say instead:**
  - **funded before it's listed**, **credited on approval**, **you keep the full listed pay**;
  - **stock tokens where eligible (issuer's terms)**.

---

11. Roadmap

#	Ships
W1	TaskEscrow + WorkerPass + quick tasks (Judge, Verify) + test questions + web app
W2	Reviews (delayed draw), default rules, payouts, pay handles
W3	Agent API/MCP + x402 funding; Test and Label tasks; tiers
W4	Gigs (milestones, accept/start, partial-work path) + client dashboard
W5	Contracts + Pay runs (reserved periods, streaming, pay statements)
W6	Stock-token payout choice (eligible countries) + holdings view + tips
W7	Work history sharing; launch bonuses (USDG); Telegram mini app (if allowed)
W8	Local tasks (strict categories, blurring, signed capture)
